

# CRYPTO-BOX<sup>®</sup>

## Serial

**CRYPTO-BOX<sup>®</sup> Serial (CBS3) - A next generation protection hardware device with a 9 pin serial interface. 100% compatible with MARX CRYPTO-BOX<sup>®</sup> USB. The CRYPTO-BOX<sup>®</sup> Serial can be efficiently used for a wide range of solutions under Win32 or Linux/Unix environment, where serial interface is preferred. Ideal for security or software and data protection.**

Guarantee revenue for each additional license.

### Control who uses your software and data.

Use the CRYPTO-BOX to protect your Software. If the CRYPTO-BOX is not attached to the computer, then the software will not run. The CRYPTO-BOX cannot be duplicated, and each CRYPTO-BOX is uniquely programmed for every MARX customer. Distribute one CRYPTO-BOX for every license or use our server based Dongle for multiple seat user limits.

- 9 pin RS232 serial interface
- 4 kilobytes of internal memory (up to 64 kilobytes available)
- AES/Rijndael hardware support
- 100% compatible with MARX CRYPTO-BOX<sup>®</sup> USB
- Supports Win32, Linux and Solaris
- No device drivers are required.

Securing the Digital World<sup>SM</sup>

SOFTWARE SECURITY

Professional software protection secures sales and profits

The CRYPTO-BOX Hardware based Software Protection System prevents the abuse of software licensing agreements

## CRYPTO-BOX<sup>®</sup> Serial

### A small but powerful encryption engine and secure container

#### Features Include:

- Network Function with license management system key can be set with simultaneous user limits
- Data encryption supports on board AES / Rijndael algorithm with a 16 byte key that never leaves the hardware platform.
- Unique serial number for every CRYPTO-BOX Serial
- On board encrypted 4 Kilobyte EEPROM (on request 64 Kilobyte supported)
- Reliable communication and device identification
- Officially certified and approved published algorithms (RSA, AES/Rijndael) are supported.
